JDS SECURITY

CYBER SECURITY ASSESSMENTS

JDS is CREST (International) certified as a penetration testing service provider, offering expert advice and consulting for a range of security requirements. We utilise the latest globally recognised standards, benchmarks and methodologies to ensure our tests and audits are relevant to today's security risks. JDS uses proactive, detailed and industry-best practice threat intelligence to increase your organisation's resilience against cyber threats, on time and on budget.

VULNERABILITY ASSESSMENT

Vulnerability Assessments involve a predominantly automated process that is focused on searching for, detecting, and categorising existing vulnerabilities within a given system. A JDS Security Vulnerability Assessment provides a point-in-time analysis of the level of risk and the degree of potential damage that a specific exploit poses to an organisation. Vulnerability Assessments are recommended to be conducted on a recurring basis, in order to develop a Vulnerability Management Plan.

CLOUD SECURITY ASSESSMENT

A JDS Cloud Security Assessment is a comprehensive evaluation of an organisation's cloud infrastructure to determine if the appropriate levels of security have been implemented.
We can identify vulnerabilities in the internal cloud landscape, detect potential risks, and discover evidence of prior exploitation.
Carrying out a holistic analysis of your cloud environment can significantly reduce the potential of a breach, and improve overall resilience.

SYSTEM SECURITY AUDIT

A System Security Audit reviews the performance and controls of an organisation's operational system. By assessing the overall health of your system, you can help to protect your customers' and employees' personal data, company financial information, and other vulnerable access points within your internal environment. A methodical System Security Audit should be carried out periodically to ensure that no gaps exist within your IT systems and security programme.

Established in 2003, JDS Australia delivers specialist services in a set of technologies and capabilities that ensure critical IT systems work.

JDS focuses on IT Monitoring (Observability), Security, Service Management, Quality Assurance and Automation as areas that enterprises and government departments need to increase the value of their investments. With an entirely local team of 100+ employees, JDS has the trusted skills and experience to ensure IT works and Australian business carries on.
