

NEW RELIC: PLATFORM HEALTH CHECK

WWW.JDS.NET.AU/NEW-RELIC/

ASSESS YOUR BUSINESS OBJECTIVES

JDS will arrange an initial workshop to understand the key business & observability objectives.

REVIEW YOUR ENVIRONMENT CONFIGURATION

We will analyse your existing environment, infrastructure and key applications being monitored

COMPLETE A GAP ANALYSIS

Identifies any significant omissions, unused features or critical gaps in your current platform coverage.

REPORT ON KEY FINDINGS & OBSERVATIONS

You will receive a written report detailing the key findings, recommendations and a sample best practice guide.

FINE-TUNE YOUR PLATFORM TO ENSURE OPTIMUM PERFORMANCE

New Relic is a comprehensive observability platform which enables you to ingest, analyse and alert on all of your metrics, events, logs and traces, quickly visualise and troubleshoot your entire software stack in one experience, and automatically detect anomalies, correlate issues, and reduce alert noise.

Carrying out a health check on your existing New Relic platform will empower you to gain a better understanding of the tool's capabilities, identify where you may be working with out-of-date versions, unused critical features or underlying platform issues, and provide general guidance on obtaining greater insights into the health of your primary environment.

WHY JDS?
